Functiona un	The general information of the LCA refers to whole lifecycle, beginning with the raw naterial make, the manufacturing of the product until the disposal of <i>one</i> unit of the product with an anticipated lifespan of 15 years. But the division of impact factors with the masses of the product allowes also a specific statement in mass.

Recycling rate (EoL)

The chart shows the presently usual recycling rate in Western Europe, based on the used material mix.

The thermal recycling will release energy to the amount of 110 MJ. This is equivalent to 3,1 litre of light fuel oil.

The remaining ash from the incineration will be disposed of in a landfill.
