spyn:

Communication in motion

*Agility is increasingly becoming a key concept for companies. Only those who work (together) in an agile manner can adapt quickly and react to changes and unforeseen developments at short notice. The space available can also contribute greatly to agility by allowing different work and communication situations to be changed rapidly. The **spyn** mobile folding table range is the ideal companion for making spatial changes very easily and flexibly.*

Workshops, training sessions, meetings, project work - the demands placed on the space available for teams and for collaboration are diverse. With **spyn**, Wiesner-Hager has developed a mobile folding table system that caters to the mostly very limited space available in offices thanks to its flexible range of applications. With this mobile folding table, changing configurations quickly to suit the particular application intended becomes child's play. Tables that are not needed can simply be swivelled and parked in a row to save space.

spyn is also offered as a mobile standing table. Shorter meetings in particular are often held while standing in order to infuse added agility into project groups and teams. This facilitates interaction with visualisation media and multimedia technology. It also promotes free thinking, creative brainstorming and a change of perspective. With the standing table, too, the patented swivel mechanism of the table top quickly creates space when the tables are no longer needed.

The characteristic inverted Y-frame accentuates the reduced design language of **spyn**. This guarantees a serene overall appearance, even with larger table configurations. In addition, optional quick linking elements ensure that the tables can be safely arranged at the same height in a variety of formats.
